ملخص

لا يزال السرطان تحدياً صحيحاً عالمياً كبيراً، يؤثر على الأفراد من جميع الأعمار. يعد الكشف المبكر والعلاج الشخصي أمرين حاسمين، حيث يحسنان بشكل كبير من توقعات سير المرض ونتائج العلاج. أظهرت التطورات الحديثة في أساليب التعلم الآلي (ML) والتعلم العميق (DL) وعواداً كبيرة في تعزيز الكشف عن السرطان من خلال تحليل الصور الطبية وتوقع استجابات الأدوية المحددة لكل مريض. تركز هذه الدراسة على تصنیف الأورام الدبقية، وهي نوع من أورام الدماغ، إلى أورام دبقية منخفضة الدرجة (LGG) وأورام دبقية عالية الدرجة (HGG) من خلال اقتراح نموذج تصنیف شامل للأورام يعمل على شرائط التصوير بالرنين المغناطيسي (MRI). بالإضافة إلى ذلك، تستكشف الدراسة تطوير نموذج تنبؤي لاستجابة الأدوية لعلاج السرطان من خلال الاستفادة من بيانات الأدوية الجزيئية ومعلومات خطوط الخلايا السريرية.

كلمات مفتاحية : السرطان، ورم الدماغ، استجابة أدوية السرطان، التصوير بالرنين المغناطيسي، التعلم الآلي، التعلم العميق، التصنیف.

Résumé

Le cancer reste un problème de santé mondial important, qui touche des personnes de tout âge. La détection précoce et le traitement personnalisé sont essentiels car ils améliorent considérablement le pronostic et les résultats du traitement. Les travaux récents dans les méthodes d'apprentissage automatique (ML) et d'apprentissage profond (DL) se sont révélés très prometteurs pour améliorer la détection du cancer par l'analyse d'images médicales et pour prédire les réponses aux médicaments spécifiques aux patients. Cette étude se concentre sur la classification des gliomes, un type de tumeur cérébrale, en gliomes de bas grade (LGG) et gliomes de haut grade (HGG) en proposant un modèle de classification des tumeurs de bout en bout qui fonctionne sur des coupes d'IRM. En outre, elle explore le développement d'un modèle prédictif de la réponse aux médicaments anticancéreux en exploitant les données moléculaires des médicaments et les informations sur les lignées cellulaires cliniques.

Mots clés : Cancer, Tumeur cérébrale, Réponse aux médicaments anticancéreux, IRM, Apprentissage automatique, Apprentissage profond, Classification.

Abstract

Cancer remains a significant global health challenge, affecting individuals of all ages. Early detection and personalized treatment are crucial as they significantly improve prognosis and treatment outcomes. Recent advancements in machine learning (ML) and deep learning (DL) methods, have shown considerable promise in enhancing cancer detection through medical image analysis and predicting patient-specific drug responses. This study focuses on the classification of Gliomas, a type of brain tumor, into Low-Grade Gliomas (LGG) and High-Grade Gliomas (HGG) by proposing an end-to-end tumor grading model that performs on MRI slices. Additionally, it explores the development of a predictive model for cancer drug response by leveraging drug molecular data and clinical cell line information.

Keywords : Cancer, Brain tumor, Cancer Drug Response, MRI, Machine learning, Deep learning, Classification.

Dedication

It is with profound gratitude that I dedicate this final project to all the people who contributed to its realization. The path to this moment has been challenging, but with your support, love, and encouragement, I have navigated each step with determination and perseverance.

I extend my heartfelt gratitude to my parents, whose unwavering support and encouragement have been my greatest source of strength throughout my academic journey. Your boundless love, patience, and belief in my abilities have empowered me to pursue my dreams and overcome every obstacle. From the countless hours of guidance to the sacrifices you have made, your dedication has laid the foundation for my success. I am deeply thankful for your constant presence in my life and for the values you have instilled in me. This achievement would not have been possible without you.

To my brothers Zaki and Youness, to my dear aunt whom I consider my second mother and to my uncles, thank you for your words of encouragement, kindness, and presence. And to my dear cousins Doudou, Khawla, Sheyma, and Kakou, whom I consider my brothers and sisters, thank you for enriching my life in such a wonderful way.

I want to express my deep gratitude to the friends I have met along this journey. You have profoundly impacted my understanding of trust. Thank you for being a part of my life—Rana, Taqwa, Feriel, Bouchra, Sabrina, and Zahra—your presence has brought both laughter and tears of joy into my life.

I would also like to extend my deepest gratitude to my friends and my wonderful cohort, "ELN complot". You have made these past years an unforgettable period. To the new people I got to know along my journey at ENP, from mem-

bers of VIC, IEEE SB to Vniverse, you created a healthy environment to unleash creativity. Thank you for being there with us through happy moments and challenging times. Your presence has made difficult times easier to bear. Thank you for everything you have done.

To all those dear to me, to each of you.”

- Wissal

Dedication

This work is dedicated, above all, to the memory of my beloved father, whose presence will forever live in our hearts.

And to my mother, the light of my heart and the source of my happiness. She has been both parents in one, a strong woman who has imparted her strength to me. Thank you for your unwavering gentleness that is uniquely yours. Thank you for your constant support, sacrifices and encouragement. If I am anything today, it's because you believed in me every step of the way.

To my lovely sisters, Amira and Dounia, who have been two important pillars in my life, and to my brother Souhil, for his generosity, kindness, and the long talks we've shared along the way. I might add a special dedication to my niece Randa and nephew Zayd, as they are rays of sunshine that make my life better. Thank you all for bringing warmth into my life.

After my family, I would like to thank the friends I have made along my journey at ENP. Ranging from the members of IEEE, especially my committee members, and VIC to my promotion, a special thanks to Twin Tower and Mehdi. Befriending each one of you have considerably contributed to my growth and made my three years at this school unforgettable.

I would like to make a special dedication to my friends of heart, Mika, Mehdi, Wissal, Sabrina and Bouchra. Thank you for the love and support, for your patience, and for both the silly and profound conversations we've had. You all have immensely impacted my life, and I am more than grateful to have you.

Finally, I am honored to dedicate this work to all cancer patients and their families who face the challenges of this disease with courage and resilience every day. I hope that the scientific progress to which we dedicate our time bring some ease and equality regarding the daily privileges we often take for granted.

- Feriel

Acknowledgements

Above all, we thank God, the Almighty, for having given us the courage, patience, willpower and strength to face all the difficulties and obstacles that have stood in our way throughout this work.

First and foremost, we would like to express our deepest gratitude and thanks to our project supervisor, Mrs. BENALIA Nour El Houda, for her constant guidance and support. Her unwavering kindness, gentleness, and presence have been invaluable, and we are deeply appreciative of the knowledge she has always shared with us.

We extend our sincere thanks to the President of the jury, Mr. BOUSBIA Hicham, Professor at the Ecole Nationale Polytechnique, and the Examiner, Mrs. TOUHAMI Rachida, also a Professor at the Ecole Nationale Polytechnique, for agreeing to be members of the reading committee. Their constructive analysis of this work, as well as their time, teaching, and support over the past three years, are greatly appreciated.

We are profoundly grateful to all our professors at the Ecole Nationale Polytechnique, who have guided us throughout our five years of study.

Finally, we thank everyone who has helped us, directly or indirectly, throughout our academic journey.

Wissal and Feriel.
